1 Fase 1

1.1 Clases léxicas

La descripción de las clases léxicas identificadas se hará de manera informal, en lenguaje natural.

- **SPROG**

Es el separador && que indica el fin de la sección de declaraciones y el comienzo de la de instrucciones.

- **LREAL**

Empiezan con un signo (+ o -) opcional, a continuación aparecen uno o más dígitos cualesquiera. Seguida de esta parte puede aparecer una decimal que consta de un punto seguido de uno o más dígitos cualesquiera. Por último, tiene una E o e seguida de un signo (+ o -), opcional, y de uno o más dígitos cualesquiera.

- **ID**

Comienza por una letra cualquiera y la sigue una secuencia de cero o más letras, dígitos o subrayado(_).

- **BOOL**

Es una palabra reservada que se conforma por las letras minúsculas: b, o, o, l. En ese orden.

- **NUM**

Palabra reservada formada por las letras minúsculas: n, u, m. En ese orden.

- **TRUE**

Es una palabra reservada compuesta por las letras minúsculas: t, r, u, e. En ese orden.

- **FALSE**

Palabra reservada que contiene las siguientes letras minúsculas: f, a, l, s, e. En ese orden.

- **PLUS**

Representa una suma, \+.

- **MINUS**

Representa una resta, \-.

- **MUL**

Representa la multiplicación, *.

- **DIV**
Representa la división, $/$.
- **IS**
Representación de la asignación, $=$.
- **EQ**
Representa una comparación, $==$.
- **GT**
Representa el mayor que, $>$.
- **GEQ**
Representa el mayor o igual que, $>=$.
- **LT**
Representa el menor que, $<$.
- **LEQ**
Representa el menor o igual que, $<=$.
- **NEQ**
Representa una desigualdad, $!=$.
- **AND**
Representa el operador lógico and.
- **OR**
Representa el operador lógico or.
- **NOT**
Representa el operador lógico not.
- **POP**
Representa un paréntesis de apertura, $($.
- **PCL**
Representa un paréntesis de cierre, $)$.
- **EOL**
Representa el punto y coma como separador especial, $;$.

1.2 Especificación formal

Vamos a utilizar DR_s para dar una descripción formal del lenguaje que conforman las clases léxicas del apartado 2.1.

- (*) $SPROG \equiv \&\&$
- (*) $LREAL \equiv \underline{L}ENT \ \underline{P}DEC? \ \underline{P}EXP?$
 $PDEC \equiv \backslash. \ \underline{Dig}^* \ \underline{Dig}$
 $PEXP \equiv (E \mid e) \ \underline{L}ENT$
 $LENT \equiv \underline{Sign}? \ \underline{Dig}^* \ \underline{Dig}$
 $Sign \equiv [\backslash+, \backslash-]$
 $Dig \equiv [0-9]$
- (*) $ID \equiv \underline{Letter} (\underline{Letter} \mid \underline{Dig} \mid -)^*$
 $Letter \equiv [a-z, A-Z]$
 $Dig \equiv [0-9]$
- (*) $BOOL \equiv b \ o \ o \ l$
- (*) $NUM \equiv n \ u \ m$
- (*) $TRUE \equiv t \ r \ u \ e$
- (*) $FALSE \equiv f \ a \ l \ s \ e$
- (*) $PLUS \equiv \backslash+$
- (*) $MINUS \equiv \backslash-$
- (*) $MUL \equiv \backslash*$
- (*) $DIV \equiv /$
- (*) $IS \equiv =$
- (*) $EQ \equiv ==$
- (*) $GT \equiv >$
- (*) $GEQ \equiv >=$
- (*) $LT \equiv <$
- (*) $LEQ \equiv <=$
- (*) $NEQ \equiv !=$
- (*) $AND \equiv a \ n \ d$
- (*) $OR \equiv o \ r$
- (*) $NOT \equiv n \ o \ t$
- (*) $POP \equiv \backslash($
- (*) $PCL \equiv \backslash)$

[I] SEP \equiv [' ', \t, \n, \r, \b]

1.3 Diagrama de transiciones

2 Fase 2

2.1 Gramática incontextual

La especificación sintáctica utilizara la siguiente tabla de operadores.

Operador	Prioridad	Aridad	Tipo	Asociatividad
+, −	0	2	infijo	izq.
and	1	2	infijo	der.
or	1	2	infijo	no
<, >, ==, !=, <=, >=	2	2	infijo	no
*, /	3	2	infijo	izq.
−	4	1	prefijo	si
not	4	1	prefijo	no

Con los operadores definidos procedemos a realizar la especificación.

$S \rightarrow \text{Prog EOF}$

$\text{Prog} \rightarrow \text{LDec SPROG LIns}$

$\text{LDec} \rightarrow \text{LDec EOL Dec}$

$\text{LDec} \rightarrow \text{Dec}$

$\text{LIns} \rightarrow \text{LIns EOL Ins}$

$\text{LIns} \rightarrow \text{Ins}$

$\text{Dec} \rightarrow \text{NUM ID}$

$\text{Dec} \rightarrow \text{BOOL ID}$

$\text{Ins} \rightarrow \text{ID IS Exp0}$

$\text{Exp0} \rightarrow \text{Exp0 Op0 Exp1}$

$\text{Exp0} \rightarrow \text{Exp1}$

$\text{Exp1} \rightarrow \text{Exp2 AND Exp1}$

$\text{Exp1} \rightarrow \text{Exp2 OR Exp2}$

$\text{Exp1} \rightarrow \text{Exp2}$

$\text{Exp2} \rightarrow \text{Exp3 Op2 Exp3}$

$\text{Exp2} \rightarrow \text{Exp3}$

$\text{Exp3} \rightarrow \text{Exp3 Op3 Exp4}$

$\text{Exp3} \rightarrow \text{Exp4}$

$\text{Exp4} \rightarrow \text{MINUS Exp4}$

$\text{Exp4} \rightarrow \text{NOT Exp5}$

$\text{Exp4} \rightarrow \text{Exp5}$

$\text{Exp5} \rightarrow \text{LREAL}$

$\text{Exp5} \rightarrow \text{TRUE}$

$\text{Exp5} \rightarrow \text{FALSE}$

$\text{Exp5} \rightarrow \text{POP Exp0 PCL}$

$\text{Op0} \rightarrow \text{PLUS}$

$\text{Op0} \rightarrow \text{MINUS}$

$\text{Op2} \rightarrow \text{EQ}$

$\text{Op2} \rightarrow \text{GT}$

$\text{Op2} \rightarrow \text{GEQ}$

$\text{Op2} \rightarrow \text{LT}$

$\text{Op2} \rightarrow \text{LEQ}$

$\text{Op2} \rightarrow \text{NEQ}$

$\text{Op3} \rightarrow \text{MUL}$

$\text{Op3} \rightarrow \text{DIV}$

2.2 Gramática transformada

Vamos a transformar la gramática de la sección anterior para obtener una gramática LL(1) equivalente.

$S \rightarrow \text{Prog } \underline{\text{EOF}}$
 $\text{Prog} \rightarrow \text{SDec } \underline{\text{SPROG}} \text{ SIns}$
 $\text{SDec} \rightarrow \text{Dec LDec}$
 $\text{LDec} \rightarrow \underline{\text{EOL}} \text{ Dec LDec}$
 $\text{LDec} \rightarrow \varepsilon$
 $\text{SIns} \rightarrow \text{Ins LIns}$
 $\text{LIns} \rightarrow \underline{\text{EOL}} \text{ Ins LIns}$
 $\text{LIns} \rightarrow \varepsilon$
 $\text{Dec} \rightarrow \underline{\text{NUM}} \underline{\text{ID}}$
 $\text{Dec} \rightarrow \underline{\text{BOOL}} \underline{\text{ID}}$
 $\text{Ins} \rightarrow \underline{\text{ID}} \underline{\text{IS}} \text{ Exp0}$

$\text{Exp0} \rightarrow \text{Exp1 R0}$
 $\text{R0} \rightarrow \text{Op0 Exp1 R0}$
 $\text{R0} \rightarrow \varepsilon$
 $\text{Exp1} \rightarrow \text{Exp2 R1}$
 $\text{R1} \rightarrow \underline{\text{AND}} \text{ Exp2 R1}$
 $\text{R1} \rightarrow \underline{\text{OR}} \text{ Exp2}$
 $\text{R1} \rightarrow \varepsilon$
 $\text{Exp2} \rightarrow \text{Exp3 R2}$
 $\text{R2} \rightarrow \text{Op2 Exp3 R2}$

\text{DIR}(\text{Op2} \rightarrow \underline{\text{NEQ}}) &= \{\text{NEQ}\} \\
\text{DIR}(\text{Op3} \rightarrow \underline{\text{MUL}}) &= \{\text{MUL}\} \\
\text{DIR}(\text{Op3} \rightarrow \underline{\text{DIV}}) &= \{\text{DIV}\}
\end{aligned}$$

3 Fase 4

3.1 Funciones constructoras

El primer paso para poder generar las funciones constructoras es simplificar la gramática incontextual generada en la fase 2.

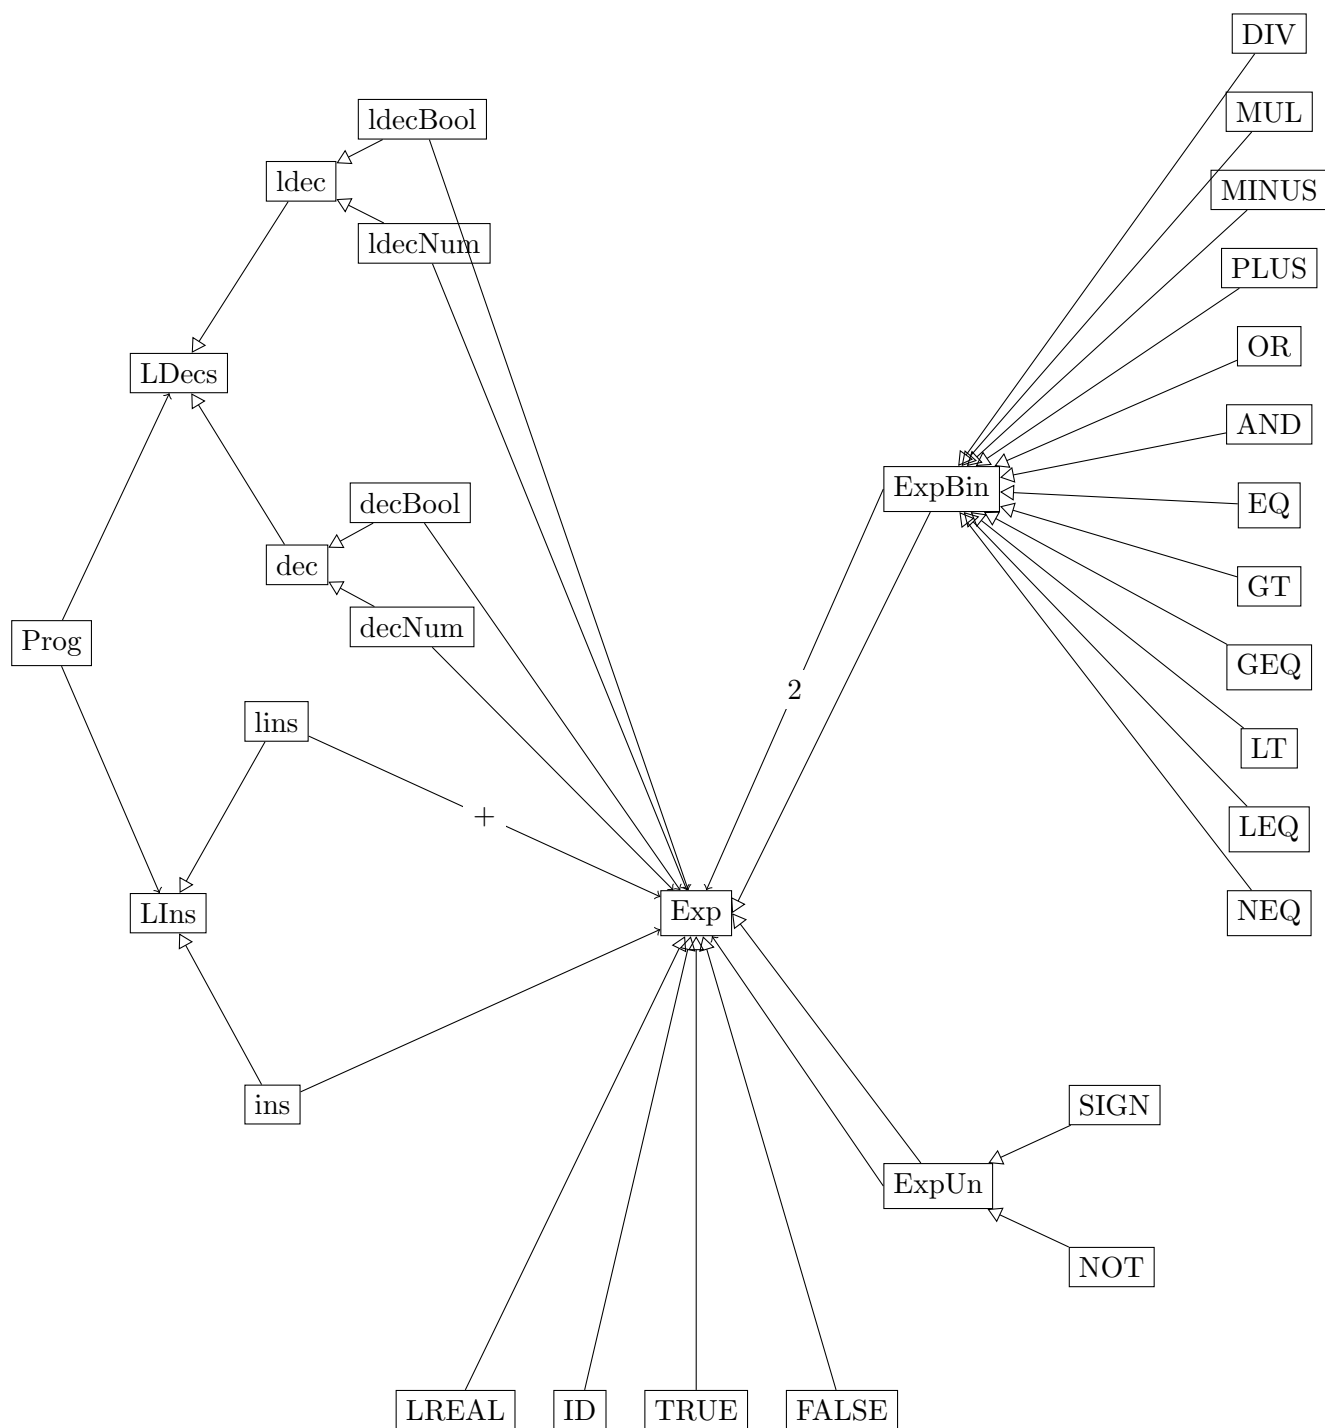

$$\begin{aligned}
\text{Prog} &\rightarrow \text{LDec } \underline{\text{SPROG}} \text{ LIns} \\
\text{LDec} &\rightarrow \text{LDec } \underline{\text{EOL}} \text{ NUM } \underline{\text{ID}} \\
&\quad | \text{LDec } \underline{\text{EOL}} \text{ BOOL } \underline{\text{ID}} \\
&\quad | \underline{\text{NUM}} \underline{\text{ID}} \\
&\quad | \underline{\text{BOOL}} \underline{\text{ID}} \\
\text{LIns} &\rightarrow \text{LIns } \underline{\text{EOL}} \underline{\text{ID}} \text{ IS } \text{Exp} \\
&\quad | \underline{\text{ID}} \text{ IS } \text{Exp} \\
\text{Exp} &\rightarrow \text{Exp } \underline{\text{PLUS}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{MINUS}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{AND}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{OR}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{EQ}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{GT}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{GEQ}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{LT}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{LEQ}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{NEQ}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{MUL}} \text{ Exp} \\
&\quad | \text{Exp } \underline{\text{DIV}} \text{ Exp} \\
&\quad | \underline{\text{MINUS}} \text{ Exp} \\
&\quad | \underline{\text{NOT}} \text{ Exp} \\
&\quad | \underline{\text{LREAL}} \\
&\quad | \underline{\text{TRUE}} \\
&\quad | \underline{\text{FALSE}} \\
&\quad | \underline{\text{POP}} \text{ Exp } \underline{\text{PCL}}
\end{aligned}$$

Por cada una de las reglas de esta gramática simplificada generaremos una función constructora.

- $\text{Prog} \rightarrow \text{LDec } \underline{\text{SPROG}} \text{ LIns}$
 $\text{prog}: \text{LDec} \times \text{LIns} \rightarrow \text{Prog}$
- $\text{LDec} \rightarrow \text{LDec } \underline{\text{EOL}} \text{ NUM } \underline{\text{ID}}$
 $\text{ldecNum}: \text{LDec} \times \text{String} \rightarrow \text{LDec}$
- $\text{LDec} \rightarrow \text{LDec } \underline{\text{EOL}} \text{ BOOL } \underline{\text{ID}}$
 $\text{ldecBool}: \text{LDec} \times \text{String} \rightarrow \text{LDec}$
- $\text{LDec} \rightarrow \underline{\text{NUM}} \underline{\text{ID}}$

Las funciones mkexpb y mkexpu son las encargadas de construir las expresiones apropiadas para operadores binarios y unarios, respectivamente.

```

fun mkexpb (op, opd1, opd2) {
  switch(op) {
    '+': return plus(opd1, opd2)
    '-': return minus(opd1, opd2)
    '*': return mul(opd1, opd2)
    '/': return div(opd1, opd2)
    'and': return and(opd1, opd2)
    'or': return or(opd1, opd2)
    '==': return eq(opd1, opd2)
    '>': return gt(opd1, opd2)
    '>=': return geq(opd1, opd2)
  }
}

```

```

    '<': return lt(opd1, opd2)
    '<=': return leq(opd1, opd2)
    '!=': return neq(opd1, opd2)
  }
}
fun mkexpu (op, opd) {
  switch(op) {
    '-': return sign(opd)
    'not': return not(opd)
  }
}
